

# SAN MARCO

## RESOURCES

### Exploring copper, silver and gold in Mexico

**San Marco Resources (TSX.V: SMN)** A Canadian mineral exploration company with a portfolio of projects in mining-friendly Mexico, including the Chunibas, 1068 and Espiritu SMR Projects in Sonora State.

#### CHUNIBAS PROJECT

*Sierra Madre Occidental Belt, Sonora State*

Metals	Copper, Silver
Stage	Advanced Exploration, Drill Ready
Size	530 Hectares
Ownership	100%

#### PROJECT HIGHLIGHTS

Assay Results from the Discovery Zone – (03-26-2018NR)

- ▶ 10.5 metres of 1.13% copper and 16.91 g/t silver.
- ▶ 7 metres of 2.19% copper and 27.3 g/t silver.

#### NEAR TERM FOCUS

Initial drill campaign with JV partner Antofagasta PLC to begin in October, 2018.

#### 1068 PROJECT

*Sierra Madre Occidental Belt, Sonora Belt*  
Located less than 10km North of the Chunibas Project

Metals	Copper, Molybdenum & Gold
Stage	Drill Ready
Size	1,800 Hectares
Ownership	100%

#### PROJECT HIGHLIGHTS

- ▶ This project is a drill ready copper, moly, and silver Laramide porphyry system.
- ▶ Mineralized footprint increased and is open for expansion in at least two directions.
- ▶ Recent geophysical survey coupled with geological data have outlined four main targets, ready to be drill tested.

#### ESPIRITU SMR

*Sierra Madre Occidental Belt, Eastern Sonora State*  
Located less than 30km S.E. of the Chunibas and 1068 Projects

Metals	Gold, Copper, Molybdenum, Silver, Lead & Zinc
Stage	Ground Validation and Prospecting Work
Size	2,712 Hectares
Ownership	100%

#### PROJECT HIGHLIGHTS

The Espiritu SMR property covers an extensive prospective area with two mineralized zones; a northeast zone dominated by a gold – copper porphyry setting, and a southwest zone dominated by precious and base metal veins.

### SAN MARCO OPTIONS THE CHUNIBAS PROJECT IN MEXICO TO ANTOFAGASTA (August 9, 2018)

- ▶ Earn-in agreement with a wholly-owned subsidiary of Antofagasta PLC over San Marco's 100% owned Chunibas Project in Sonora State, Mexico.
- ▶ A firm exploration expenditure commitment of US \$600,000 will be used primarily for an initial drill program.
- ▶ Antofagasta can acquire 70% interest in the Chunibas Project by incurring US \$8 Million in exploration expenditures and make cash payments for an aggregate amount of US \$200,000 over a period of 4 years.
- ▶ The initial drill program is anticipated to start in October, 2018. San Marco Resources will be the project operator.

# INVESTMENT HIGHLIGHTS

## MANAGEMENT

Track record of company builders and value generators; deep roots in Mexico.

## PRIME PROJECT LOCATION

Three (3) key projects in proximity to producing copper, gold and silver mines.

## SONORA STATE

Part of the world class Sierra Madre Occidental belt stretching 1,500km.

## PARTNERSHIP

San Marco recently optioned up to 70% interest in the Chunibas Project to Antofagasta PLC.

## DRILL CAMPAIGN

Exploration drilling at the Chunibas Project to commence in October, 2018.

## COMPANY BUILDERS

**Forward-Looking Information** Statements contained in this presentation that are not historical facts are forward-looking statements, which involve risks, uncertainties and other factors that could cause actual results to differ materially from those expressed or implied by such forward-looking statements. Factors that could cause such differences, without limiting the generality of the following, include: risks inherent in exploration activities; volatility and sensitivity to market prices; volatility and sensitivity to capital market fluctuations; the impact of exploration competition; the ability to raise funds through private or public equity financings; imprecision in resource and reserve estimates; environmental and safety risks including increased regulatory burdens; unexpected geological or hydrological conditions; changes in government regulations and policies, including trade laws and policies; failure to obtain necessary permits and approvals from government authorities; weather and other natural phenomena; and other exploration, development, operating, financial market and regulatory risks. Except as required by applicable securities regulation, San Marco Resources Inc. (SMN) disclaims any intention or obligation to update or revise any forward-looking statement, whether as a result of new information, future events or otherwise.

**National Instrument 43-101 Disclosure** This presentation has been approved by San Marco's Co-Chairman, Robert D. Willis, P. Eng. a "Qualified Person" as defined in National Instrument 43-101, Standards of Disclosure for Mineral Projects of the Canadian Securities Administrators. Other than the historical information, Mr. Willis has verified the technical information contained in this presentation. This Presentation includes technical information that was generated prior to the introduction of National Instrument 43-101. Details of the sampling methods, handling, and quality control methods used in the generation of this historical technical data are unknown to San Marco, and the drill material, assay results, true width of intercepts herein cannot be and have not been verified by the Company's Qualified Person for the purposes of National Instrument 43-101.

**Quality Assurance & Quality Control** San Marco has implemented a quality assurance and quality control programs to ensure sampling and analysis of all exploration work is conducted in accordance with the best possible practices. All sampling programs are carried out in a careful and diligent manner using scientifically established sampling practices designed and tested to ensure that the results are representative and reliable. Quality control programs appropriate to the type of sample and the mineralization are implemented, including such measures as external blanks, standards and duplicate samples. The security of samples from sample acquisition to analysis is a vital component of the sampling process. Procedures include the use of secure core logging, sampling, storage and preparation facilities as appropriate and the prompt, secure and direct shipping of samples to the laboratories. Appropriate sample security procedures are employed given the geographic and topographic conditions and the logistics created by the site location.
